

SmartDrives provide an opportunity to direct end recipients to your website.

When the SmartDrive USB is plugged in to a computer, the end user is presented with a user interface (UI). Along with the manifest to the content, a space is provided for a company logo. If the user clicks on the logo, it goes to any website specified.

Step 1.
Choose your USB

Step 2.
Add files to USB and link your logo to your website

When placing your order, advise the sales person what website address you want the company logo to link to, and it will be programmed into your order.

Traffic from the SmartDrive to your website can be tracked.
